CRYPTO FISHING

What is Crypto Fishing?

It is an NFT game that consists of taking care of your NFT fish, which inhabit your fish tank and are attacked by pests that can make your fish sick or scare.

Community

In Crypto Fishing, you will never play alone. Crypto Fishing is a community where players can support each other through activities. Players can trade their items on the MartketPlace. In the future, new things will come with player voting. We always LISTEN to all of you Crypto Fishing citizens and we make this Crypto Fishing partnership more exciting.

GAMEPLAY

Farm

One of the game modes that we have in Crypto Fishing

It consists of taking care of your fish, a way to generate token within the game. Your fish can get sick or scared due to pests that invade your tank. If your fish become ill due to pests, you can cure them with health kits which restore the health of your fish. If your fish tank is attacked by pests it will cause your fish to get scared, in which case you should remove the pests that invade your fish tank with a fishing net which is an item that you can get in the store.

PvP

It will be the game mode in which you will compete against your neighbors. The PvP mode will be based on a race, in which you will have to dodge multiple objects which will be in your way and will make it difficult for you to reach the goal. The one who manages to dodge the obstacles that will be on your way will win and reach the goal first.

Visit your neighbors

It consists of helping your neighbors in caring for their fish. In which you will have to heal your fish, drive away pests and feed the fish.

Daily missions

The daily missions will be tasks which you will have to do once a day, which are:

Feed your fish.

Heal fish from your

neighbors

.Feed fish from your

neighbors.

Drive away pests that invade your neighbors.

Participate in minigames.

Play-To-Earn

You can generate income within Crypto Fishing in multiple ways:

Farm mode: You will generate income for the proper care of your NFT fish.

PvP: You can compete against your neighbors, in this way generate income earned games. Your rewards will vary due to the rank you are in.

Visits to neighbors: In this game mode you will be able to generate income by helping to care for the fish in your neighbors.

Daily missions: A mode to rewards our players on a daily basis, once they perform the established tasks.

Necessary requirements to access the game

In the world of Crypto Fishing you must meet the following requirements to access:

The minimum income to access the game will be 150 CFG. At the time of entering you will have a fish tank which will have limitations as there is no NFT fish tank, the limitations are as follows: You cannot sell this item in the Market or transfer it and you can only have a Maximum of 3 fish in these tanks.

You can put a maximum of 10 fish in your NFT tank at the same time

In order to access Crypto Fishing, an NFT fish will not be necessary, however by not having an NFT fish you can only generate income by performing daily missions

You will need to buy the food for the fish, the fishing net and the maintenance filter for your fish tanks. With 150 CGF you can make purchases of these objects already mentioned in the game.

Store and Item

It is the internal store of the game in which different items are for sale for the care of your fish tank, some of them are:

Fishing Net: An object with which you can eliminate the pests that invade your fish tank.

Filter: It is the object in charge of the maintenance of your fish tank, if you do not have this filter, it will seriously affect the production of your fish.

Food: It is the food of the fish, which you should give them on a daily basis, if you do not feed them, the production of your fish will stop immediately.

Algae: It is an object to prevent your fish from getting sick for 24 hours.

Castle: It is an object which will increase a set percentage of the amount of token that your fish generate during 24 hours.

Coral: It is an object with which you can prevent pests from invading your fish tank for 24 hours.

Breeding

Crypto Fishing is an ecosystem, we bring all the activities of life in the ocean to your fish tank. Therefore, surely, your fish can also give birth to fish.

All fish will have a maximum reproduction rate of 5 for each fish. The eggs will have an incubation process of 10 days.

You can have these fish for your own use, such as selling them in the market to other players of the Crypto Fishing family.

Marketplace

Crypto Fishing is not only a complete ecosystem, but also a community.

You can take care of your fish, breed new fish, and sell them on MarketPlace.

If you have any special fish that you want to share with other players, or want to find good fish for your tank, let's go to MarketPlace.

You can price your fish and trade them in an open freedom market.

Not just Fishes, you can also sell your specialty accessories here at MarketPlace.

All business activities are under the control of the gaming community.

And only a 10% fee will be charged for each business activity on MARKETPLACE.

Tokenomy

Token Information

The main token of the game is the CFG which will be the necessary token to access the game. This token will be in the Smart Chain Network, it will have a Total Token of 100,000,000.

Token distribution

Allocation	Amount	Percentage
Rewards	30,000,000	30%
Private Sale	5,000,000(Price: 0,15$/token)	5%
Public Sale	10,000,000 (Price: 0,20$/token).	10%
Liquidity Pool	15,000,000	15%
Stake	25,000,000	25%
Team	6,000,000 (Locked 12 months, unlock after 12 months, unlock 10% every month)	6%
Marketing	2,000,000	2%
Airdrop	7,000,000	7%

Oracle

The purpose of the pricing oracle is to balance the CFG payment earned through caring for your NFT tanks, along with the anchoring costs to the current dollar value of the CFG.

This means that the following will happen if the dollar value for each CFG increases:

Decrease in payments in CFG.

The cost of the items in the game would go down by CFG.

The update of your NFT assets would decrease in CFG.

If the price of CFG in dollars decreases, the opposite of the aforementioned is true.

Oracle System Advantage dynamically adjusts costs and rewards up or down based on changes in CFG's dollar value.

## Why Implement an Oracle System in Crypto Fishing?

In order to maintain an economic balance within the game that is balanced around an established dollar value.

This system protects limited tokens to prevent a group of users from taking over most of the CFG tokens. By using oracle, Crypto Fishing forms a correlation between active users and dollar value in CFG.

Suppose that when the price of the CFG increases, the demand for the token also increases through the launch of new game features or the influx of new players.

The oracle will ensure consistent dollar payments per transaction at the time it was made, in addition to ensuring that the costs of the NFTs remain at a constant dollar value.

This will allow entry costs and rewards to be balanced and sustained over extended periods of time, and precisely maintain the desired costs to allow new players the opportunity to play even if the dollar value of the CFG increases.
